

# Did you know?

The housefly is the most common fly. It has two eyes. Each eye has over 4,000 smaller eyes within it. Flies are gray with four black stripes on top. They are about 1/4 inch long. Flies do not have teeth. They taste with their mouths and with their feet. They only eat liquids. Their tongues have a spongelike tip so they can suck up their food. Houseflies can carry disease organisms in their bodies.

Imagine you woke up and discovered you were a housefly. Write a story about how you look and what you do. Include some of the facts you have learned about houseflies.
