

# What Can We Learn From Animals?

## STAY LOYAL

Female elephants and their female offspring spend their entire lives together. If danger is near, the adult elephants stand guard around the calves.

## BE UNIQUE

A tiger's stripes are like a human's fingerprint; the pattern is unique to every tiger.

## BE ADAPTABLE

Whales live in every ocean, from the very cold waters of the Arctic and Antarctic to the warm seas surrounding islands in the Caribbean and South Pacific. They even swim into rivers to find food.

## COMMUNICATE

Wolves howl for different reasons. Lone wolves howl to attract their pack, and packs of wolves howl in chorus to warn other packs to stay away.

## BE PREPARED

Before going into hibernation, bears consume up to 20,000 calories a day. They won't eat again until they come out of hibernation in the spring.

## SHOW STRENGTH

Owls can carry prey weighing three times their size. Other types of raptors, such as hawks and falcons, have the strength and stamina to migrate thousands of miles and fly more than 40 miles per hour.

## NEVER BE A BULLY

The whale shark is the largest living fish in the world and can grow up to 45 feet in length. Despite this size, it is very gentle and completely harmless to people.

## BE CURIOUS

Seals follow boats and kayaks to see what is happening, but they are easily threatened when people try to get too close.

## DO YOUR PART

Butterflies and other insects pollinate crops and make products such as honey and silk.

## BE A FRIEND

Dogs and cats have many of the same needs as humans—food and water, shelter, exercise, and companionship.
